

IN THE SPECIFICATION:

Paragraph beginning at line 15 on page 22:

The configuration of Fig. 6 is particularly useful when an infrared laser is used as laser 102 for structure sorting capability. Although, as discussed above with respect to Fig. 3, the separate signals from receivers 134 and 136 can provide the capability to sort also by color variations, in ~~[[it]]~~ certain situations it may not be preferred to use infrared light for sorting by specific visible colors.
